

ENCOURAGE HOME ENTERPRISE.

P. J. NOYES,

PHARMACEUTICAL CHEMIST,

LANCASTER, NEW HAMPSHIRE.

THESE PRICES ARE NET, ARE SUBJECT TO MARKET FLUCTUATIONS, AND INCLUDE BOTTLES AND POTS.

FLUID EXTRACTS.

Prepared in strict accordance with the U. S. P., 1860. They are prepared from the fresh drug by the process of cold percolation, and each minim represents one grain of the drug, unimpaired by heat.

I take pleasure in calling the attention of the profession to the above Price-List, and earnestly invite a careful perusal of its contents.

I am aware that the establishment of a Medical Laboratory in a remote country town is an enterprise not often undertaken, and one which presents difficulties that may seem hard to encounter. But I have been induced to undertake it by the repeated assurances of approbation, and the liberal patronage accorded me by physicians of the highest professional standing all over New England. The flattering recognition which I have received at the hands of the profession has been won *only* on the merits of my goods; and on this foundation *alone* do I expect to extend the number of my patrons and retain their good will. Having had a long and extensive experience as a retail pharmacist, I am in a position to appreciate fully the wants of physicians; and it is my ambition to place before the profession preparations which may be administered in the fullest confidence that the desired results will follow. By employing none but drugs of *known* superior quality, by employing those processes which long experience has proven to be the best, and by employing none but the most skilled assistants, I feel warranted in guaranteeing my preparations *equal* to the very best, and if it is possible to make them *superior*, nothing will be left undone to accomplish that end.

My goods *cannot* be obtained in market, as I prefer to send them direct from my laboratory, so that I shall be sure that they are in a fresh and perfect condition.

And here I wish to call attention to a very important point: All medicines that can be made in a day or two—such as Tinctures, Elixirs, Syrups, Wines, Ointments, &c., &c., are not kept in stock but made *only when ordered*, so that they are perfectly fresh, and have not deteriorated by exposure to light, heat, molecular change, and in the various ways by which the quality of medicinal preparations are affected. This is a matter, the importance of which cannot be overestimated, and one which will be appreciated by all physicians.

By reference to my list it will be seen that my prices are very moderate, being as low as strictly officinal goods can be afforded. I prepay all express charges on my goods so that the objection to sending small orders is removed. I most earnestly solicit a *trial* order, if no more, as I feel confident that a *trial* of my goods will insure their continued use.

Very Truly Yours,

P. J. NOYES.
